DRIVELOCK IDGARD

2026 BETA

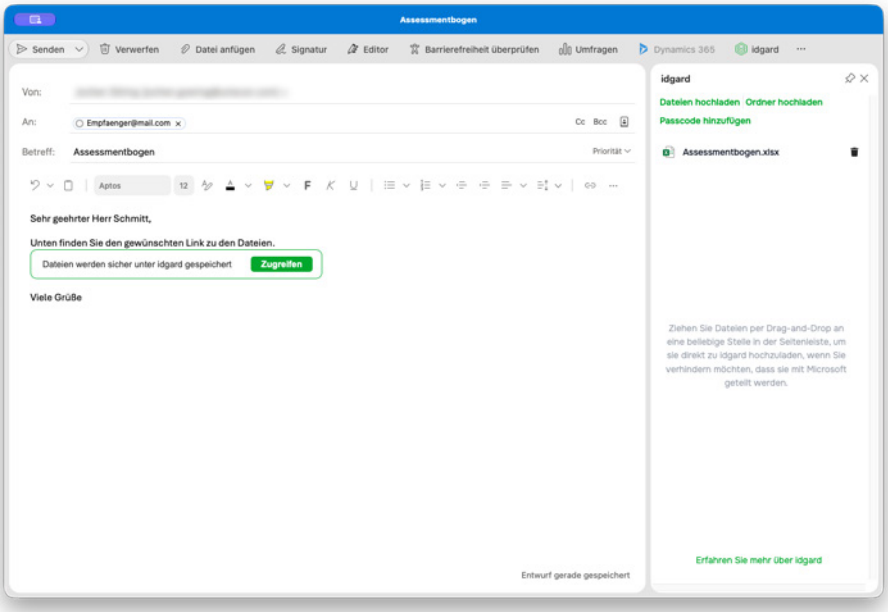

idgard for Outlook Secure file sharing – right from Outlook

Emailing confidential information puts your data at risk

- **Confidential attachments slip out of your control.**
  Once sent by email, files linger on mail servers, in mailboxes and in backups. It becomes hard to control who can access them, where they are stored and whether they get forwarded.
- **Secure file sharing is often too cumbersome.**
  When sharing files securely takes several extra steps, employees tend to fall back on sending sensitive documents as plain email attachments.

Secure File Sharing Directly in Outlook

Send files securely without leaving Outlook. With idgard for Outlook, email attachments are automatically replaced with protected idgard links, allowing users to work exactly as they always have.

Up and running in three steps

How an Outlook attachment becomes a protected link:

Select a file in Outlook 1

Right from your email – no need to switch to another tool.

idgard stores the file 2

The attachment is stored in idgard and replaced in the email with a secure link.

The recipient downloads it from idgard 3

Not from their mailbox – access is only granted after successful authentication.

KEY BENEFITS

- **One click instead of five steps.**
  Share files securely without leaving Outlook or switching between applications.
- **No more sensitive attachments in Exchange mailboxes.**
  Confidential files stay out of mailboxes and backups – with a central overview and a complete, audit-proof trail of every share.
- **Lower risk of data protection and compliance breaches.**
  Helps meet statutory confidentiality obligations, e.g. for lawyers, physicians and auditors.
- **Secure access via link.**
  Content is only accessible to authenticated recipients.

IDGARD – FOR ORGANIZATIONS THAT TAKE CONFIDENTIALITY SERIOUSLY.

The Outlook add-in makes sharing easy.
The idgard platform ensures your confidential information stays fully protected.

- **Sealed Cloud:** Data stays protected even during processing – with no way for the operator to decrypt it
- **Metadata protection** for an extra layer of confidentiality, e.g. for file names and user identities
- **Made and operated in Germany:** “housing, not hosting” – no US parent company
- **Proven security backed by recognized certifications:** ISO/IEC 27001 and ISO 9001, TISAX-certified, BSI C5 candidate
