SECURITY AWARENESS

Ensure sustainable security awareness.

YOUR CHALLENGES

The majority of successful cyberattacks are the result of human error or misconduct. Attackers specifically exploit people to gain access to sensitive data via phishing e-mails and social engineering. They use manipulated media to infiltrate the company with malware. That's why you need to raise security awareness:

You want to increase employee awareness as part of your security strategy. Just one training session does not raise your employees' awareness sufficiently.

You want to run modern, event driven and relevant security awareness campaigns.

You need high-quality training content with integrated tests.

You need training certificates for audits.

OUR SOLUTION

Reduces risks by raising your employees' security awareness – HYPERSECURE IT

Provides event-driven training that is continuously available online or offline and can be completely administered centrally

Displays interactive security-relevant information at the right time, e.g. when a USB drive or media is inserted

Shows scheduled and automated campaigns, for example once a week or month

Features ad-hoc publishing of response measures in the event of a security incident

Documents the implementation of protective measures in accordance with the GDPR

YOUR BENEFITS

- 1 Strengthens your human firewall by training your employees
- 2 Comes with flexible, cost-efficient and target group-oriented campaigns
- 3 Offers various and customizable media formats
- 4 Displays security-relevant information immediately and interactively for end users
- 5 Documents the implementation of protective measures as defined by the GDPR
